

Case Study

PANINI'S BAR AND GRILL

"The biggest success the system has had on operations, aside from keeping the even flow of people at the front door, is the increase in sales at the bar."

CLIENT PROFILE

PANINI'S BAR AND GRILL

Panini's Bar & Grill opened its first river-front restaurant in May 1986, in the heart of Cleveland's Flats entertainment district. Since then, Panini's has grown from a late night beer and sandwich stop to a full-menu, casual dining restaurant. While most famous for their trademark "over-stuffed sandwich", customers now recognize the quality and value of Panini's entire menu, and their excellent table-side service. Panini's offers a variety of appetizers, salads, wraps, and many other items while maintaining a highly motivated staff providing excellent customer service.

CHALLENGE

With the growth of their business, Panini's Franchise Group had incorporated hostesses at some of its high volume locations. Scott Fisher, responsible for Restaurant Development for Panini's Franchise Group, was familiar with paging systems and how well they can affect a business. According to Fisher, when considering implementing a guest paging system into their operation, "Our expectation was to have a nice customer flow at the host stand, and create a relaxed atmosphere for our customers such that they don't have to worry about being overlooked".

SOLUTION

System Components: (Per Location)

- 20 – Coaster Call Pagers
- 1 – 30-Caster Charger
- 1 – T7400 Transmitter

System Installation

The company has been using the systems for over a year now, and has installed systems in 3 locations. Each location is equipped with 20 pagers, and one (1) T7400 transmitter, which are installed at the host stand.

System Implementation

Upon greeting guests who arrive, the host/hostess records their name, the number of people in the group, the pager number assigned to them, and their arrival time. The guests are then encouraged to have a seat at the bar (if applicable), as they wait to be paged and to be seated. When their table is ready, the host enters the pager number assigned to the guest at arrival using the T7450 transmitter, and presses "enter". The guest's pager vibrates and flashes, letting them know to return to the host stand to be seated. The hostess then records the time the guests are seated. In the event that a manager is needed, the host can simply enter the assigned manager pager number, and the manager instantly receives a page and can address any issues.

Solving New Technology Challenges

As the paging system provides guests with the freedom to roam the area as they wait to be paged, making sure that all pagers are retrieved from customers is important. At times, locating pagers may be necessary. The T7400 is equipped with an Auto-Locator feature that sends out a signal to all pagers, causing them to vibrate and beep. According to Fisher, "At the end of the evening, we take an inventory of pagers, if any are missing, we use the pager locator function."

RESULTS

Increase Bar Sales

The paging system allows guests to enjoy other services as they wait. While waiting for their table, Panini's guests are handed a pager and are encouraged to go to the bar and have a beverage. According to Fisher, the restaurant has experienced an increase in sales at the bar from waiting guests.

Improve Guest Flow

Managing the even flow of people at the front door has been one of the benefits Panini's has experienced from using the system. Congestion is minimized at the host stand, as guests are able to roam the premises once they are handed a pager.

Instantly Notify Managers

According to Fisher, "the function that a hostess can locate a manager at any time has been very useful." The system allows the host/hostess to instantly page a manager when they are needed. This allows managers to handle issues immediately once notified, and helps improve customer service and customer satisfaction.

Guests Are Not Overlooked

Unlike other methods such as overhead paging, or yelling out guest's names that can sometimes be missed when notifying guests, the guest paging system "...creates a relaxed atmosphere for the customer", comments Fisher. In addition to that, "they [guests] feel secure in the fact that they will not be overlooked when their name comes up on the list," adds Fisher.

FUTURE

As Panini's has experienced success from using LRS' Coaster Call guest paging system, the restaurant group plans to continue using system in the future.
